

Hi, my name is Maria Kiryanova. In 2016 I graduated from a MOS «Power Plant Engineering» in English of Peter the Great St. Petersburg Polytechnic University. This master program not only taught me a lot of interesting things, but also gave an amazing experience of internship in Europe. These two years are some of the best moments of my life. I learned a lot and understood that diligence and desire make any goal achievable no matter how complex it might have seemed.

MOS courses include a wide variety of topics and make students not only solve problems but approach them creatively and work as a team, which is very useful for future careers. For me the best qualities of SPbPU are its excellent learning environment, good quality of teaching and a wide range of research available to all students. The opportunity to be educated in English appeared recently, enabling students to practice their language skills and to become worldwide specialists.

University cooperates with many interesting companies and has close ties with a large number of higher education institutions around the world, providing a lot of career choices for its graduates. There are many interesting research projects and competitions organized by the university. Over the years of training my scientific work and high academic performance has been repeatedly awarded with grants, which is a great incentive for any student, as it really nice when your work is noticed and valued.

After graduating with honors from the master's program and spending two semesters of internships in Finland and Germany, I received many career offers in my native city and beyond, which speaks for the high quality of education in SPbPU, which is valued by employers. MOS gave me a lot: I graduated from a prestigious university with honors, found an interesting job in the largest shipbuilding company in Russia, where I can apply my knowledge for the prosperity of my country, to see the results of my work and cooperate with the best professionals in the field. It is worth noting separately that international Master program gives you an opportunity to see the world, meet new different people and make friends from many countries.
